REPORT ID	68A80D	MRN		NAME	
REPORT	Univfy PreIVF Report	DOB		AGE	37
				REPORT DATE	7/1/2026

Your Likelihood\* of Having a Baby in:

What are the chances that you won't have a baby after 3 cycles?\*

IVF

58%

approx. 83%

90% or higher

10% or lower

## How do your chances of having a baby from IVF compare to intrauterine insemination (IUI) or trying naturally on your own?

The average likelihood of a couple with 3 years of infertility conceiving naturally per month of trying on their own: **<3%**.

The probability of having a live birth from each IUI cycle is around **8%** for women under 38 and **5%** for women between 38 and 42. (Reindollar et al., 2010; Goldman et al., 2014)

Here a cycle means an IVF cycle and any frozen embryo transfers using suitable embryos from that IVF cycle. This likelihood of having a baby accounts for IVF success from the use of all available suitable embryos (fresh and/or frozen) resulting from each IVF cycle. This likelihood is also calculated with the assumption that you elect to have PGT-A.

\*If you are found to have poor oocyte or embryo quality in your first IVF cycle (e.g., resulting in one or no suitable embryos of good quality), your cumulative chances of having a baby over 2 or 3 IVF cycles will be much lower.

The 95% confidence limits for the predicted probability differ by less than 1%. The prediction error underestimates probabilities by 0.9%. The probabilities of having a baby shown here for 2 and 3 cycles assume that these cycles are done within 18 months of the first cycle.

## Your Outlook

In a group of 100 women starting their first IVF treatment at our practice:

**52** have success rates higher than yours

**3** have success rates the same as yours

**45** have success rates lower than yours

We analysed your health data by using the IVF success prediction model that was developed and validated for Beacon CARE Fertility based on Univfy's proprietary AI/machine learning predictive technology.

This report is based on your current health data. If your health condition changes, the report may need to be updated and the chances of having a baby from IVF may change.

## IVF Services at Beacon CARE Fertility

Beacon CARE Fertility is a global leader in cutting-edge IVF treatments and advanced embryo viability screening. Known for our innovation, expertise, and industry-leading success rates, our team brings decades of experience in helping people achieve their family goals.

In partnership with CARE Fertility, a pioneer in fertility treatment since 1997, we continue to set new standards in Fertility Care. In 2024, we joined a select group of healthcare providers worldwide recognised with the JCI "Gold Seal of Approval" for Quality and Safety.
